

providing a supply of plurality of sheets of a sheet-cut form of hologram recording photosensitive film comprising a supporting film, a hologram recording photosensitive material and a separator, said supply of sheets being in a pre-cut form and plural ones of said sheets being stored together in said pre-cut form;

iteratively feeding ones of a substrate from a supply having a plurality of substrates,

iteratively feeding ones of said sheet-cut form of hologram recording photosensitive film,

B1
cont.
releasing said separator from said fed ones of said sheet-cut form of hologram-recording photosensitive film, and

laminating said ones of said sheet-cut form of hologram-recording photosensitive film from which said separator is released on one surface of said fed substrate from a hologram recording photosensitive material side.

8. (Twice Amended) A hologram-recording dry plate fabrication system comprising:

a substrate feeding means for iteratively feeding ones of a discrete substrate,

B2
a supply of sheet-cut form film in a discrete pre-cut form, wherein plural ones of said sheets being stored together in said pre-cut form, said sheet cut form of film having a separator,
